

On-Schedule Mission Management

ai automation[®]

Taking the initiative

Ai Atom is generating missions on a pre-defined schedule.

aiatom.ro

On-Schedule Mission Management

- The simple type of schedule can be:
 - Do it every x minute (hours / days).
 - Do it every day (hour, minute, etc) at a specific time.
- It can handle multiple missions with multiple timers.

On-Schedule Mission Management

- The more advance type of schedule is with integration with other systems (ERP / WMS / PLC / etc) and the schedule is based on conditions.
- There are many variable actions that can be defined with On-Schedule Delivery.
- Example: Do it every hour if the total produced parts is bigger than 100 – If the condition is not met at the specific time, it is skipped until next hour.
