# Simple Barcode or QR Code

- The scanning is done with a regular QR Code / Barcode Scanner that is connected via Bluetooth, cable, wireless, etc. to a PC / Tablet / Laptop.
- When the Part Number is scanned, the “order” will immediately generate a mission for MIR (Fleet or individual robot).
- The mission can be assigned with variable data, or it can be done in a databases where position and part number of the scanned data is associated (corresponding position with the scanned data).
