

Traffic Light System

ai automation[®]

Taking the initiative

Ai Atom Traffic Light System can control a Signal Tower to notify when a robot enters an area where it can cross-paths with other moving objects or people.

aiatom.ro

Traffic Light System

- Example: On intersections when there are people, machines and AMRs together, a Traffic Light can be controlled for visual and/or audio notification that there are robots in that area.
- This avoids accidents and congestions.
- This can be combined with Door Control System or with Forklift / AGV / IGV / AMR Detection System.
